Samsung Galaxy Tab S8+

The best Android tablet for most users

Samsung's latest Tab S8 series promises a lot to be excited about. As is the case with all tablets, the centerpiece here is the big, bold display which offers support for Samsung's most advanced S Pen. Let's see how it fares.

DESIGN AND DISPLAY

The display on the Tab S8+ is a 12.4-inches AMOLED panel. It runs a fixed resolution of 1752x2800 pixels and is capable of touching a fast 120Hz refresh rate.

It's one of the brightest panels you can find on a mobile device at the moment. It offers punchy colours and deep blacks, with its overall performance similar to any panel found on a flagship Samsung phone or tablet.

Around the display, however, is some amount of bezel, which actually is a welcome move as it makes using the device easier by minimising the chance of accidental touches.

The panel on the device rests nicely on a brushed aluminium slab which melts into the display to create a uni-body design. There are also antenna lines and a strip to charge the S-Pen at the back. Overall, all these elements come together to create what looks and feels like a truly premium device.

PERFORMANCE AND BATTERY

Much like other Samsung tablets before it, the Galaxy Tab S8+ is also powered by the most advanced hardware available for Android-based devices. We get Qualcomm's latest Snapdragon 8 Gen 1 SoC under the hood which is paired with 8GB of RAM and 128GB of storage.

BUILD.....	85
FEATURES.....	85
PERFORMANCE.....	80
VALUE.....	80

Apps of daily use including Instagram, Twitter and internet browsers perform as expected. In our time with the device, we noticed no signs of lag or stutters when using the device in the normal tablet mode -- DeX, however, was a different matter altogether.

This is because the DeX mode on the Galaxy Tabs still remains riddled with bugs. Aspect ratio to app resize and crashing issues, there is a lot that Samsung needs to fix at its end before DeX based tablets can take over Windows machines.

But like we said, outside the DeX environment, the tab S8+ gave us little to complain about, with the new tablet also doing well in games such as Call of Duty Mobile and Asphalt 9 Legends. However, in benchmarks, the performance was all over the place.

Coming to the battery, the Galaxy Tab S8+ does not disappoint. In real-world usage, we found the tablet to easily give over a day's use even if you watch a lot of movies and stream shows on it. Gaming does bring the battery life down drastically. But for most users, the average run-time on a single charge for the Tab S8+ should be one day at least. And when the tablet does run out of charge, it offers support for Samsung's latest Super-Fast charging

which promises to charge at 45W. However, the required charger is not included in the box.

S PEN AND MORE

Living up to tradition, the Galaxy Tab S8+ brings with itself the latest S Pen from Samsung, which now offers significantly reduced input latency -- down from 9ms to just 2.8ms.

In a bid to make the Galaxy Tab S8+ an, even more, productivity-friendly tool, Samsung has also launched a separate optional keyboard cover accessory which we're happy to report is better than ever before. It has a built-in kickstand, which now actually holds up the tablet much better than previous kickstands did.

VERDICT

The Galaxy Tab S8+ is an interesting device. In our opinion, it is definitely the best Android tablet there is for most users. So if you're looking for a new tablet that's based on Android to complement your ecosystem of Android devices, then the Galaxy Tab S8+ is definitely the device for you. The only question you'll need answering is if it's better compared to its elder sibling, the Galaxy Tab S8 Ultra. As things stand, the Galaxy Tab S8+ comes in at a more affordable price point than its older sibling, but still manages to offer a similar package. Which in our view automatically makes it the better choice of the two. You get all that there is to love about the new Samsung Galaxy tablets in the Tab S8+, making it a very easy recommendation for us.
