Indian Neobanks

Indian neobanks and where they stand

Ankush S. | feedback@digit.in

N

eobanks are startups that offer services that, in most cases, are cheaper than traditional banks.

They are not officially recognised as banks in India but each neobank has partnered with a traditional bank to offer their services. Intrigued? Here's how they work.

WHAT ARE NEOBANKS?

Customers can use neobanks as a cheaper alternative to traditional banks. You might think of them as digital banks without physical branches that provide services that traditional banks don't and do so

effectively. They use artificial intelligence and technology to provide personalised services to customers while keeping costs down.

These companies in India do not have their own bank licence and rely on bank partners to provide licenced

services. Because the Reserve Bank of India (RBI) does not yet permit banks to be fully digital, this is the case (though some foreign banks offer digital-only products through their local units.) The RBI has stated that banks' physical presence should be prioritised and that digital banking service providers should also have a physical presence.

NEOBANKS VS TRADITIONAL

Traditional banks have a number of advantages versus neobanks, including access to capital and, most crucially, client trust. Legacy systems, on the other hand, are weighing them down, making it impossible for companies to adapt to the changing needs of the tech-savvy youth.

While neobanks lack the money and client base to unseat traditional banks, they do possess a unique weapon: innovation. They may introduce new products and form partnerships to better serve their consumers far faster than traditional banks.

Retail clients, as well as small and medium businesses, are served by neobanks, which are underserved by traditional banks. They use the mobile-first concept to set themselves apart by introducing cutting-edge products and providing exceptional customer service.

DISADVANTAGES OF NEOBANKS

Avoid banking with cutting-edge institutions like neobanks if you don't like keeping up with technology trends. You won't be able to take full advantage of the possibilities if you aren't comfortable tapping and

swiping your way through brand new apps. Neobanks may not be for you if you don't enjoy experimenting with new technology.

You may not have legal remedies or well-defined protocols to follow if you have a problem with an app, services, or non-regulated third-party service providers because neobanks aren't legally recognised banks. There may also be some misunderstanding as to who will be held responsible for any potential fraud.

While it is becoming easier to do everything online and neobanks are frequently collaborating with ATM networks, some people still prefer to go to a branch and bank in person. This is especially true when dealing with sophisticated deals. While many neobanks have comprehensive customer service departments, some customers may prefer to speak with a live person.

FI VS NIYO VS JUPITER

In recent years, the neobanking concept has gained traction in the country. Some players have a sizable consumer base, while others are still in the early stages. You can choose from three low-cost neobank applications with no minimum balance requirements.

Fi

To provide financial services in the country, Fi Money has collaborated with Federal Bank. The neobank was developed by Sujith Narayanan and Sumit Gwalani, co-creators of Google Pay, and is primarily targeted at salaried millennials and working professionals.

Fi provides a free VISA Platinum debit card with no fees. Furthermore, there is no FX markup cost, allowing you to make international payments without incurring additional fees. The software is easy to use and includes features such as daily, weekly, and monthly spending reports.

You can open Smart Deposits to save for your financial objectives while earning a reasonable interest
