

Metaura Pro

Funding: US\$ 62,086 pledged of US\$ 5,000 goal

Link: <https://dgit.in/metaura>

Summer is here in full swing and boy, would it be great to have a wearable AC. We know most people in the sweltering hot cities in India have wished for this at some point in their lives. Metaura Pro is just that – a portable, wearable air conditioner. This wearable is reportedly the world's first wearable AC capable of blowing constant cold airflow that is 7-degrees Fahrenheit lower than your surroundings. The micro air conditioner can be worn around your neck, although it does look pretty chunky. The Metaura

Pro packs a twin-turbo PWM motor with an aerodynamic air duct for cooling. It reportedly uses a high-precision NTC (Negative Temperature Coefficient) sensor to monitor your body temperature in real-time and

the device then attempts to regulate it by auto-adjusting the temperature. The device is also compatible with an app that allows you to adjust the Metaura Pro's temperature as per your requirements if needed. If you live in a chilly area, there's a heating function as well! The device also supports up to 22W Fast Charge via USB C, so you can top it up relatively quickly. The device lasts 8 hours on fan mode, 5 hours on cooling mode, and 6 hours on heating mode.

T1 Tomahawk

Funding: US\$ 1,801,949 pledged of US\$ 10,000 goal

Link: <https://dgit.in/t1tomahawk>

Reckon Tools has launched a fantastic new tool dubbed the T1 Tomahawk that adds digital measurement functionality to a standard tape measure. As the tape is pulled out, an OLED screen on the device displays the measured length. The screen can display imperial and metric units as per the user's preference. There's also a button right next to the screen that records the measurement. This saved measurement is then displayed on an e-link screen on the side of the device. Multiple measurements can be recorded via this method and they appear on the side in a scrollable fashion which is pretty convenient for long projects. Additionally, the data can also be accessed and shared via an Android and iOS app. The device even comes with laser projection that is ideal for aligning to surfaces. The laser can extend 90mm in either direction. The company states that the Tomahawk Measurement Engine is "extremely robust against errors, tape measure wear, is self-calibrated by moving the blade, and holds accuracies beyond 1/32" (0.5 mm)." The tape even allows for incremental measurements without the need for addition or any math operation. The planned retail price for the device is \$260.

AIPER Seagull 3000

Funding: US\$ 381,674 pledged of US\$ 10,000 goal

Link: <https://dgit.in/aiperseagull>

Aiper Intelligent Co. Ltd, manufacturers of pool-cleaning solutions, launched the new Aiper Seagull 3000 via Kickstarter. This is a completely wire-free robotic pool cleaner with 120W suction power. The unit can even climb walls to get the muck off the sides of your pool as well! It comes with a triple-motor system and uses durable PVC brushes to clean the pool. Usually, cordless pool cleaners are low on power and thus, have weak suctioning abilities. However, with the Seagull 3000, Aiper is attempting to solve this issue by having a floating battery design so the

device doesn't have to use as much power to lug a heavy battery around the pool. The battery is a 7,800mAh unit and promises 120 minutes of continuous runtime. The device also connects to an app via Bluetooth allowing for hands-free operation at all times. Aiper also claims

that it can clean out fine debris, that is particles as small as 180µm. The Seagull 3000 can also clean from all angles with smart auto-turning allowing it to move in any direction. The device is priced at \$1,300 and you can pre-order it for 38 per cent off as of writing.
