

Medieval Dynasty

Sandbox meets management simulator

When you're first dropped into the world of Medieval Dynasty, it comes across as any other survival sandbox game – think Rust, Ark: Survival Evolved, DayZ, or Valheim. At this point, you're thinking either "Sweet! I know exactly what I need to do", or "FFS! I already know exactly what I need to do". Either way, your reaction is understandable. However, there's more to Medieval Dynasty than meets the eye. Let's crack on!

STORY

Whaattt? There's a story??! Yes and no. There's an underlying story yes, and your progress is tied to this story. Essentially, you need to do the story in order to unlock and gain access to stuff. However, we'd recommend you do the

story anyway, because it also serves as a tutorial of sorts.

The story itself is pretty bare bones and functions as an origin story for your character, Racimir. Our main character has escaped his village which was attacked (by bandits I think?) and his parents were killed. He's come to visit his uncle who supposedly owned a village, looking for a place to stay and start over. Turns out, his Uncle is dead too, but the new guy in charge basically tells Racimir to pick a spot and set up shop, i.e., build his own village (with blackjack and hoo- *ahem*). And so your Medieval Dynasty begins.

GAMEPLAY

Medieval Dynasty is a mishmash of many gameplay elements and genres.

Let's start with the obvious, the Survival Sandbox elements. There's a reason the game initially feels like all those games we mentioned in the intro. It's pretty much the same, pick up stones and sticks, craft an axe, chop trees, get logs, get access to more tools, gather better materials, and so on. You will use said materials to build your village. However, you will eventually hit a wall. Remember how we told you progression is tied to the story? Yeah. So you'll need to do some running around and be an errand boy for a bit. You get a lot of freebies from exploring around the world, so ultimately it might be worth it.

SKILLS

There are other factors which limit your access to more advanced buildings and
