OnePlus 10 Pro

The archetypal smartphone

The OnePlus 10 Pro is OnePlus' nineteenth phone in its flagship series since its inception almost nine years back in 2013. As its latest flagship offering, the OnePlus 10 Pro brings the best in class hardware and is trying to be a cut above the OnePlus 9 Pro. But how does it perform? We find out in this review.

BUILD AND DESIGN

The design of the OnePlus 10 Pro seems to have divided the OnePlus fan base. Some like it while others are not too fond of a chunky camera module. We received the Emerald Green colour option for this review and it looks and feels great in the hand. The back of the phone has a soft matte finish that isn't friendly to either fingerprints or smudges. The front and the back panels have been reinforced with Gorilla Glass Victus and Gorilla Glass 5 respectively for added protection.

DISPLAY

The display on the OnePlus 10 Pro is great for daily use. It is a second-generation LTPO panel that can automatically switch between 1-120Hz refresh rate based on the usage habits. The display on the OnePlus 10 Pro recorded 885 nits of peak brightness and can get really bright when required.

In the sRGB colour space, the average deltaE error was 2.5 and the maximum deltaE error was 3.9, which are pretty good numbers. The colour volume test recorded 96.9 percent gamut coverage for the sRGB colour space. We switched to the DCI-P3 colour space where our Calman recorded 96.4 percent colour gamut coverage with an average deltaE value of 2.7 and max deltaE value of 4.2.

PERFORMANCE

The Snapdragon 8 Gen 1 has turned out to be quite a power-hungry chipset and even though the OnePlus 10 Pro uses

Price
₹66,999

a five-layer cooling system, the CPU recorded temperatures in excess of 50-degrees on all cores. Even though in synthetic benchmarks, the OnePlus 10 Pro receives reasonable scores that are in line with other Snapdragon 8 Gen 1 scores, it still trails behind the iPhone 13 and Galaxy S22 in AnTuTu and Geekbench tests. The CPU Throttling test recorded around 28-29 percent decline.

We used Gamebench to measure the gaming metrics of the OnePlus 10 Pro. COD Mobile ran at 60FPS with 99 percent stability at Very High graphic quality and Max frame rates. Similarly, Asphalt 9 ran at 59FPS at 97 percent stability. Now, all these data points are proof of the incredible gaming experience that the OnePlus 10 Pro offers.

OxygenOS 12.1 is a mess and devoids users of the wonderful experience the OnePlus 10 Pro is capable of. The current crop of OxygenOS 12.1 is riddled with bugs. OnePlus has taken stock of the situation and promised that it will rectify this with OxygenOS 13.

CAMERA

OnePlus 10 Pro builds upon an already

versatile camera system we saw in the 9 Pro backed by. The main camera is capable of producing good-looking pictures in daylight with vibrant colours and sharpness. The natural depth of field effect looks great and the HDR processing is on point. At night, the main camera is capable of taking sharp images in the presence of an artificial light source but it goes for a toss when you switch to the night mode. The night mode controls the highlights and tries to bring in more clarity to shadow areas but it loses out on sharpness.

BATTERY LIFE

OnePlus 10 Pro features a larger battery than the previous iterations and gets support for 80W fast wired charging up from 65W on the 9 Pro. We got 7+ hours of screen-on-time on normal use with casual gaming and YouTube viewing on the side which is great. In our video loop test, the OnePlus 10 Pro went on for around 18.5 hours before shutting down. The 80W fast charging adapter manages to fully charge the 10 Pro in 37 minutes.

VERDICT

The OnePlus 10 Pro has a gorgeous display, performance chops that rival the top flagship phones, and a long-lasting efficient battery life. All of this is neatly packed in a slim and lightweight profile. However, the signature OnePlus experience that these phones were known for but isn't fully there due to the codebase merger between OxygenOS and ColorOS.

—Siddharth Chauhan

SPECIFICATIONS

DISPLAY: 6.7-inch 10-bit AMOLED, QHD+ (3216x1440 pixels), 120Hz refresh rate | WEIGHT: 200g | SOC: Qualcomm Snapdragon 8 Gen 1 | RAM: 8GB/12GB LPDDR5 | BUILT-IN STORAGE: 128GB/256GB UFS 3.1 | OS: OxygenOS 12.1 based on Android 12 | REAR CAMERA: 48MP + 8MP telephoto + 50MP ultra-wide | REAR CAMERA VIDEO: 8K (24FPS), 4K (30/60/120FPS) 1080p (30/60FPS) | FRONT CAMERA: 32MP | BATTERY AND CHARGING: 5,000mAh, 80W wired, 50W wireless
