

Android 13 beta open for everyone

Android 13's beta is now open for everyone with a Pixel and is not only restricted to developers. <https://digit.in/may22-56>

Archetype set to close \$150m fund

Archetype, an early-stage crypto venture capital firm, plans to close a \$150 million fund on May 2. <https://digit.in/may22-57>

Micromax In 2c

Decent stock Android phone for non-power users

Micromax is a smartphone company that caters to the masses with its inexpensive smartphones. The latest budget smartphone on offer from the company is the Micromax In 2c. Is the phone a competent value-for-money product in the sub 10K price segment or will it be overshadowed by others?

BUILD AND DISPLAY

The Micromax In 2c is a well-built budget smartphone. We were quite pleased with the matte plastic back with a textured finish. The back has a radiating design originating from the camera module that looks pretty decent. The phone feels solid to hold with little to no creaks when flexed. The buttons have good feedback and are quite tactile. The front of the phone is adorned with rather large bezels and an even larger chin. The dewdrop selfie camera cutout looks dated as well.

The Micromax In 2c's display isn't what we'd call a stunner in any way. It is a pretty simple 6.52-inch HD+ LCD display with no fast refresh rate. You do get WideVine L1 support for high-definition content on streaming platforms, but Netflix did not play HD content on this phone for some reason. The display's colour accuracy is decent and it has good viewing angles. However, legibility takes a hit in direct sunlight and you may find it really hard to read the information on the screen.

PERFORMANCE

The Micromax In 2c is powered by the UNISOC T610 SoC with an octa-core

CPU running at a clock speed up to 1.8GHz. The processor is pretty decent for general day-to-day usage such as texting, calling, social media, streaming, and more.

Gamers and power-users must steer clear of the device though.

The 3GB of RAM means that multitasking isn't as smooth as one would hope, with app crashes happening often when you open multiple demanding apps such as

games and benchmarks.

Speaking of benchmarks, let's delve more into that. Running

AnTuTu got us a score of 193233 which is neck and neck with its competitor – the Nokia G21. However, the Realme Narzo 30a, which is a much older phone in the same price range, beats it. In Geek-

Bench 5, the phone falls slightly behind the Narzo 30a in both Single and Multi Core tests. But it does beat out the Nokia G21 in the Single Core test.

When we played COD Mobile, the game ran at Low graphics and Medium framerate. The gameplay wasn't exactly smooth, but the stutters and lags weren't unmanageable. However, we still wouldn't recommend this phone to a hardcore gamer at all.

The phone comes with Android 11 out of the box, completely devoid of any sort of bloatware in the form of third-party apps. We enjoyed the stock Android experience and it isn't something we get to experience often.

CAMERA

The camera is not the Micromax In

2c's strong suit. The phone is equipped with an 8 MP primary lens and a depth camera. The cameras have poor dynamic range with overexposed highlights and crushed shadows. The colour reproduction also leaves something to be desired.

BATTERY LIFE

The Micromax In 2c houses a pretty sizable 5,000mAh cell with 10 W charging. The phone's battery life is pretty decent and most users should be able to squeeze out a day and a half or two days' worth of usage. We ran a gamut of games and benchmarks on the phone during our testing period and still got over a day's worth of battery life. Fifteen minutes of playing Call of Duty: Mobile drained the battery by 6 per cent while 30 minutes of Netflix streaming dropped the battery by 5 per cent. The 10 W charger is slow though and charged the phone from zero to full in 2 hours and 35 minutes.

VERDICT

The Micromax In 2c is an entry-level stock Android smartphone that doesn't really have much else going for it. Priced at ₹8,499, the phone's performance is lacklustre when it comes to the camera, gaming, and charging. However, if you're looking for a simple phone that performs well when it comes to basic, day-to-day tasks such as calling, texting, social media, and more, this phone works fine for that. However, we cannot fully recommend this phone to anyone since the Realme Narzo 30a performs better when it comes to camera and gaming by a significant margin and only costs ₹500 more to purchase.

—Dhriti Datta
