# S

martphones are more ubiquitous now than ever before, with lower data and hardware costs

allowing for mass adoption. The landscape of smartphone technology has changed dramatically in the past decade, with every year harkening new innovations and features to get excited about. According to a report by Research and Markets, the Indian smartphone market size was valued at \$139 billion in 2021 and is anticipated to grow with a CAGR of 10.5 per cent and reach a whopping \$281 billion by 2028. The market for

smartphones is absolutely gigantic in India owing to the population and the ratio of young citizens that are getting more and more tech-savvy. Like each year, 2022 will also see certain smartphone technology emerge in a major way, making its way to phones across multiple price points. Let's take a look at some of the smartphone tech to look forward to in 2022.

### FOLDABLE AND ROLLABLE SCREENS

In 2018, the Chinese startup Royole released the very first commercially-available foldable smartphone dubbed the 'Royole Flexpai'. Granted it wasn't a successful first attempt, but it kick-started an influx of foldable concepts as well as commercially-available foldable phones. Samsung unveiled its first Galaxy Fold at MWC 2019 and since then has come out with a couple of successful renditions of the folding phone. Companies such as Huawei, Motorola, Xiaomi and others have since brought out their own versions. The concept of turning a candy bar

style phone into a full-fledged tablet is appealing to power users and those who felt that smartphone styles were getting too monotonous. Rollable phone concepts have also hit the scene with Samsung even rumoured to launch one later this year or next year. Oppo also introduced its Rollable Concept dubbed OPPOX2021. So, we can attest to the fact that the alternative design formats of smartphones are here to stay.

### FASTER CHARGING SPEEDS

Having the ability to top up a phone's battery to a significant level in a matter of minutes is a convenience that many are thankful for. In the past year, blazing-fast charging speeds such as 65W, 67W and even 120W have made their way to commercially-available devices. In 2022, brands will continue to push the bounds when it comes to fast charging while also making it safer for battery health. Xiaomi and Oppo have already announced charging speeds pushing 200W and we should see at least
