

Dell G15 5520 and G15 5521 SE series of gaming laptops recently entered the Indian market. We caught up with Anand Subramanya, Director – Product Marketing, Consumer and Small Business, Dell Technologies and had a conversation regarding the future of the Indian gaming laptop market and how Dell is preparing itself to handle all the challenges ahead.

Q How are Dell and Alienware planning to compete with competition's gaming laptops launching this year?

At Dell and Alienware, innovation and customer feedback are never an afterthought. For pro gamers that want the best of the best in their machines, they can choose from an array of the latest Alienware devices we have launched this year. For enthusiasts, power-hungry creators, or entrants into the PC gaming arena, our G series have a lot to offer. We understand that thermal management, battery life, portability, refresh rates, and graphics continue to be some of the major pain points for the Indian gaming community. Hence, our portfolio is diversified yet customized in ways that would suit different gamer profiles. For the G Series enthusiasts, we just announced the new 5520 & 5521 (SE)!

Q How's Dell striking a balance between high performance vs thin and light laptop design? What is the market demanding more in India?

Advancement in thermal technologies in more mobile form factors continues to be the #1 request from our customers, not only in India but globally as well. We invest a significant amount of R&D into this family to discover new materials and invent breakthrough cooling solutions. Our exclusive hinge design on the X14 uses dual torque elements that allow the hinge to travel forwards and backwards on a track. This creates space inside while enabling thinness. What would otherwise be a thicker notebook or a thinner notebook with less performance is resolved with this innovative mechanical design. Furthermore, our Alienware X-Series use a TIM in-between their heatsinks and performance components to help dissipate heat away from the component and onto the thermal module. We have an exclusive new TIM formula that uses an Encapsulated Gallium-Silicone material yielding positive results that are producing up to a 25% advantage in thermal resistance.

Dell offers VFM gaming

Small Business, Dell Technologies India

Dell India's Anand Subramanya talks about how the new Dell G15 series seeks to offer VFM gaming

Yetnesh Dubey |
feedback@digit.in

This material is used directly on the CPU to help mitigate spikes in core temperatures from affecting the system's performance. Our GPU TIM uses a more common Aluminum-Silicon material. We will call it "Element 31 thermal interface material".

Q HP Victus, and Acer Nitro offer a great deal of customisation in terms of storage and RAM. What are Dell's thoughts on this when DDR5 and PCIe Gen 4.0 are on the horizon?

The gaming sector is witnessing a major shift in India with new investments, new gaming titles being launched every month, and many in the country making a career from it. Dell and its performance gaming range of laptops have not only always been at the forefront of the segment but the brand is also synonymous with gaming itself. The new G15 laptops are the perfect blend of best-in-class innovation and superior engineering. The new G15 cement Dell's leadership in the gaming sector with features like the DDR5 RAM, PCIe Gen 4 SSD, Alienware Command Center, game shift key, latest CPUs and GPUs, and fast refresh screens. It also gives the customers an option to upgrade RAM up to 32GB and up to 2TB of Storage. Our latest line-up delivers the best design, thermal controls, and robust technologies enhancing the immersive gaming experience and delivering the thrill for the enthusiasts!

Q According to Dell's market research, tell us a bit about your thoughts on the gaming audience in India. Is it largely teenagers, young professionals, or women gamers?

Over the last couple of years, there has been a growing interest among consumers when it comes to adopting gaming either as entertainment, casual gaming, or going pro. Moreover, PC gaming has been growing at a break-neck pace in India. Initially, with higher-tech penetration in metropolitans, it saw growth in the big cities. However, with the adoption of online gaming, the industry has made its way to Tier II and III cities. We've been at the forefront of shaping the gaming industry for more than 25 years with Alienware, and we are committed to delivering gaming solutions for players of all levels and budgets. We have observed a growing number in terms of the female audience and active participation in gaming on Dell Futurist. **D**
