HEADPHONES TO  
GPUS, IT'S ALL  
HERE...

**THIS MONTH IN TECH:**  
We explore if drones are  
the future of post, we  
list out a few exemplary  
clean energy startups,  
we delve into some  
exciting solar gadgets,  
and much more!

## Google announces Imagen, its AI-based image generator

Google has announced  
its new AI text-to-image  
generator, Imagen, with  
claims of "unprecedented  
photorealism". It has not  
been released in the public  
domain yet. The idea is  
that you simply say what  
you want the AI image  
generator to conjure up,  
and it does exactly that.

### WHAT'S NEW

## Motorola Razr 3 with new Snapdragon 8+ Gen 1 officially confirmed

**T**he Motorola Razr 3 foldable smart-  
phone has officially been confirmed.  
The phone will be powered by the  
new Qualcomm Snapdragon 8+ Gen 1 chipset  
which is built on TSMC's 4 nm process. It is  
claimed to offer 10 percent better CPU  
performance, 10 per cent faster graphics, and  
up to 30 per cent better power efficiency  
compared to the Snapdragon 8 Gen 1. This is a  
huge upgrade over the original Razr. The new  
Razr's chipset will be paired with up to 12 GB  
RAM and up to 512 GB internal storage. The  
phone is touted to feature dual rear cameras

including a 50 MP primary lens and a 13 MP  
ultra-wide shooter. The selfie camera is likely to  
be a 32 MP lens. The phone is expected to

**razr**

launch in China in  
July or August and  
then roll out  
globally. It will be

available in two colour variants as per reports  
– Quartz Black and Tranquil Blue. We can expect  
Motorola to reveal more details about the  
upcoming device relatively soon including the  
launch date of the phone.

## Nothing Phone (1) with transparent design previewed ahead of launch

**N**othing Phone (1)  
is one of the most  
anticipated smart-  
phones this year. With  
the Nothing Phone  
(1), Carl Pei and Co.

are aiming to radically disrupt  
how modern smartphones  
look. It's now confirmed that  
the upcoming Phone (1) will  
have a translucent design,  
just like the Ear (1) earbuds.

Tom Howard, Head  
of Design at Nothing  
in an interview with  
Wallpaper told that  
they at Nothing,  
"wanted to bring

the inside out", hinting at a  
transparent or translucent  
design for the compan's  
debutant device. It is also  
confirmed that Phone (1)'s  
frame will be made out

of recycled aluminum. In  
March, Nothing's CEO Carl  
Pei revealed that Phone (1)  
would launch in Summer  
2022. However, apart from  
that, we don't know the exact  
date of the launch. Sparking  
further speculations, Pei has  
hinted in one of his tweets  
that the Phone (1) will launch  
on June 9 at 4:20 PM.

### iPhone 14 to get a pricier selfie camera, phone cost also to go up

The front camera on the  
upcoming iPhone 14 is set to  
get an upgrade to a new "high-  
end" sensor. It could cost Apple  
three times more as the com-  
pany is reportedly switching to  
LG Innotek. This could drive up  
the phone's retail price too.

### Meta working on multi-device sup- port and status update reactions

Support for multi-device use  
and emoji reactions to status  
updates could be coming soon  
on WhatsApp. Meta is building  
on the features like emoji  
reactions, status updates, and  
multi-device functionality that  
are part of either its services.
