Indian Government wants Apple users to update their devices

If you are an Apple Mac user and you haven't updated your device(s) recently, it would be wise to do so right away. This is something that the Government of India advises you to do so. More specifically, the Indian Computer Emergency Response Team (CERT-In) has raised security concerns with the Safari browser version 15.4 and before on macOS. As reported by the Times of India, the CERT-In advisory reads, "these vulnerabilities exist in Apple Safari for macOS Big Sur and macOS Catalina due to memory corruption and use-after-free within the WebKit component. A remote attacker could exploit these vulnerabilities by persuading a victim to visit maliciously crafted web content." Apple has already released updates with all the requisite patches. So, you just need to update the Macbook or other Mac computers to the latest version 15.5.

MOBILE WATCH

Moto Frontier

Motorola has shared a poster on the Chinese social site Weibo which teases a forthcoming 200MP phone from the brand. Well, that's what we glean from the loosely translated texts from the teaser. The said image has got a giant camera lens along with an invitation to "the era of 200-million pixel images" and a promise of an "insight into unprecedented details". Now, this isn't the first time we are hearing about a Motorola phone with a 200MP camera. From the previous leaks and rumours, we think the phone could sport a 6.7-inch HDR10+ FHD+ 144Hz AMOLED display. There could be a 60MP selfie taker. As for the rear, the setup could include a 200MP main camera, a 50MP secondary shooter, and a 12MP third snapper. Inside, the Moto Frontier could be bearing a Qualcomm Snapdragon 8 Plus Gen 1. The memory combination could go up to 12GB LPDDR5 RAM and 256GB UFS 3.1 storage and the battery size could be around 4500mAh.

MOBILE WATCH

Xiaomi 12 Ultra

Xiaomi is one more smartphone brand that has partnered with a legacy camera company. The Chinese smartphone maker has joined hands with the

German camera brand named Leica. Some of you may know that Leica was previously a partner of Huawei and was behind trailblazers like the Huawei P30 Pro. The other Xiaomi

competitor to collaborate with a top-tier camera brand is OnePlus. For its flagship phones last year, OnePlus joined hands with the Swedish company, Hasselblad. So, now that a Leica badged camera will be featured in a Xiaomi phone, that could be something worth looking out for. We can fairly guess that the device in question is the Xiaomi 12 Ultra. Here's what we can guess about the phone so far - Starting off with the camera itself, Xiaomi 12 Ultra is said to feature the same set of cameras as its predecessor. That means a troika comprising a 50MP primary camera, a 48MP ultrawide snapper, and a 48MP telephoto lens. What Leica brings to the table is something to be seen. The front camera could come within a punch-hole. This screen could be a 2K Samsung display with a 120Hz refresh rate. Inside, the phone could carry the recently launched Qualcomm Snapdragon 8+ Gen 1. That's more or less what we could scour from the rumour mill.

APP WATCH

Console Launcher

 A launcher app that turns your device into a gaming console. It is designed to transform the look of the phone to match consoles. The app is one of the few with hardware controller support too.

Nothing Launcher (beta)

 A minimalist launcher that gives you a preview the Nothing Phone (1) UX. It has some basic stuff like widgets, home screens and a few customisations at the moment.

Duolingo ABC

 Duolingo ABC builds upon the success of Duolingo (a language learning app). It is a learning app designed to teach children letters, spelling, and pronunciation using mini-games and storytelling.
