

on better insulation and seals to keep batteries from catching fire. A lot of auto manufacturers also use liquid cooling tech to keep battery temperatures in check, thus reducing incidents of the battery unit catching fire.

### BUILT DIFFERENT, BRO!

Something that we all have to come to terms with is that even though EVs may share similar design characteristics, they're inherently different machines. EVs contain fewer moving parts. There is no transmission, gears etc. All this means is that there are fewer chances for things to go wrong. EVs do not follow most ICE vehicle standards when it comes to transmission and they also come with Regenerative Braking, which basically extends the life of the car's brakes and plates. Also, more interior space means more options to add safety features to protect passengers in the back.

Just to rub a bit of salt on the wound, it's clear that EVs are also faster than most ICE vehicles with the Tesla Plaid crushing speed records, beating out the Bugatti Chiron and the Porsche 918 Spyder! So, if it's speed and safety you're looking for then choosing an EV is not just the right option but the ethical one. Another thing to keep in mind is that EVs have had really only the past 30 to 40 years to really grow while Internal Combustion Engines have had about 140 years to evolve and grow and as far as we can see, we've pushed the ICE to its limit and are probably not going to get any better than what we have now. EVs on the other hand have so much room to grow. The future is kind of limitless if you think about it. **d**

# EV DISASTERS IN INDIA

Electric scooter fire: Faulty battery cells likely caused mishaps, says probe | *Electric Vehicles News (hindustantimes.com)*

problems could have started because of lax standards and cost-cutting measures, which led to a compromise of customer safety.

### E-scooter fires cause panic

There have been several incidents of e-scooter fires involving Ola Electric, Pure EV and Okinawa in the past few weeks due to faulty batteries and modules. These

year. This isn't the first time Pure EVs have had these issues. The manufacturer has seen 3 other incidents before the mishap in Hyderabad. Pure has also had to recall over 2000 e-scooters due to battery issues.

Hero Electric blames faulty power socket for Photon EV fire

### Faulty socket cause of E-scooter fire

A Hero Electric Photon E-scooter caught fire in Odisha on May 25. An investigation revealed a faulty power

socket that the EV was plugged into as being the cause of the fire and not the EV itself. The scooter was plugged into the socket and left to charge overnight.

EV fires: Boom Motors recalls Corbett bikes, stops production temporarily | *Business Standard News (business-standard.com)*

in Delhi. This incident forced Boom Motors to recall its Corbett line of e-scooters. The company is also the first E-two wheeler manufacturer in the country to temporarily halt production after the Indian government issued an order.

### Boom Motors recalls E-scooters after fire

A fire, which involved a Boom Motors scooter, caused the death of a 40-year old man in Nizamabad

Ola S1 pro electric scooter catches fire in Pune; raises concerns

### Ola E-scooter fire caught on video

An Ola S1 Pro scooter was seen burning in Pune in March 2022. The incident was captured on video and

shared on social media platforms.

What we can gather from all these incidents is that Indian E-scooter manufacturers seem to be cutting costs and corners in all the wrong places. It also doesn't help that India has some of the hottest climates in the world. It seems that most of these fires were caused by faulty batteries and battery management. Is it just a case of incompetence and callousness or is there a deeper systemic problem at the heart of the issue? Do note that these incidents only feature E-scooters and not cars.

Pure EV - Another Pure EV burns! Epluto 7G e-scooter catches fire in Hyderabad - *Times of India (indiatimes.com)*

### Pure EV scooter catches fire in Pune

- A Pure EV EPluto 7G electric scooter caught fire in Hyderabad on the 13th of May, earlier this
