

### Memory loss cure?

Scientists identify HIV drug which could potentially combat memory loss in middle-aged people. <https://dgit.in/jun22-79>

### Morbius back in theatres

Jared Leto's heavily criticized film, Morbius, is returning to theatres in the US on over 1000 screens. <https://dgit.in/jun22-80>

# Vivo X80 Pro

## In a class of its own

**T**he Vivo X80 Pro is a spiritual successor to the Vivo X70 Pro+. The X80 Pro is the fourth phone born out of the Vivo-Zeiss collaboration and brings a host of new capabilities. Has Vivo made a great cameraphone? Here's what we found out.

### BUILD AND DESIGN

The Vivo X80 Pro has a premium build and a uniquely designed camera module. The phone is pretty thin and has a soft touch anti-glare finish. The ergonomics are good and it didn't take any effort to reach either the power or volume buttons. It is protected by Schott Xensation UP glass and is IP68 certified making it resistant to dust and water ingress. The X80 Pro feels every bit as premium as the competition.

### DISPLAY

The X80 Pro features a third-generation LTPO AMOLED display which is great for watching videos and generally looks excellent in daily use. You can also select between QHD+ and FHD+ resolutions and between 60Hz or 120Hz refresh rates.

The display offers sharp visuals, and accurate colours and can get really bright in normal use. Without adaptive brightness enabled, the display was able to produce 587 nits of typical peak brightness. However, when the adaptive brightness was enabled, the brightness got upto 845 nits.

### PERFORMANCE

The Vivo X80 Pro is a solid performer. The Snapdragon 8 Gen 1 backed system is fast, smooth and can practically run any and all apps or games under the Play Store roof. While the Snapdragon 8 Gen 1 is a power-hungry chipset, Vivo has managed to offer a stable performance while keeping the thermals in check. The X80 Pro doesn't get warm to the touch like its other Snapdragon

Price  
₹79,999

8 Gen 1 powered counterparts. When it comes to synthetic benchmarks, the X80 Pro is right up there with flagship phones and received commendable scores.

We played intensive games like Call of Duty Mobile, BGMI, Genshin Impact and even the latest Apex Legends Mobile on the X80 Pro and it worked flawlessly without any major frame drops or in-game jitters. All these games ran on the highest settings at 60FPS and there's an option in the Ultra Game Mode to boost the frame rate to 90FPS via frame interpolation.

### CAMERAS

The X80 Pro is a phone that basks in the glory of the Vivo-Zeiss partnership and is quite versatile for casual and professional photographers alike.

In daylight, the main camera produces some awesome looking pictures and retains many details from the frame with greater colour accuracy. While the normal colour mode boosts the saturation levels and makes the result more vibrant, there's an option to switch to Zeiss Natural Colour Mode 2.0 which brings out close-to-natural

looking colours in a picture. In indoor lighting, the cameras can produce well-lit pictures with good details and textures. While you will be able to notice an influx of noise if you go pixel-peeping, it's still very controlled and can be fine-tuned via software updates.

The telephoto lens offers great stabilization due to the presence of Gimbal stabilisation which further improves hand-held performance allowing us to take sharp and just better-looking pictures and videos. There's a periscope lens on the X80 Pro as well which lets you zoom into a frame and produces decent pictures but being a low-resolution sensor, it isn't as sharp as the output from other cameras.

### BATTERY

The X80 Pro offered a day's worth of battery life on heavy usage with the phone's display set to QHD+ resolution and 120Hz refresh rate at all times. In our video loop test, the X80 Pro managed to go on for over 16.4 hours before giving up. In our charging tests, the X80 Pro took around 43 minutes to fully charge from 0-100.

### VERDICT

The Vivo X80 Pro is at the pinnacle of the Vivo-Zeiss partnership and brings a host of camera and video-centric features. It offers a significantly balanced performance than other Snapdragon 8 Gen 1 phones and is a great daily driver that you can depend on. The Funtouch OS is probably the only downside of the X80 Pro as it comes loaded with bloatware.
