Infinix Note 12 Turbo

Dependable performance but a few misses

The Infinix Note 12 Turbo is a budget phone priced right at the sweet spot of under ₹15,000. On paper, Note 12 Turbo has a new design and an upgraded processor inside but most of the other features like the display and cameras are the same as the Note 11. In this review, we will find out whether or not the Infinix Note 12 Turbo is a good option at its asking price of ₹14,999.

BUILD AND DESIGN

The Note 12 Turbo has a slim and light-weight profile measuring 8mm and 185 grams. It's a budget phone so the build is mostly plastic but it feels good in the hand, especially the Force Black colour which has a textured design on the back. Though there's a glossy part just beside the camera module that's made to feel like an extension but is a fingerprint and smudge magnet that in our opinion spoils the looks.

DISPLAY

The Infinix Note 12 Turbo gets a large AMOLED display with a waterdrop notch cutout for the selfie camera. The display gets really bright and is great for daily use. While Infinix claims that the screen can go upto 1000 nits peak brightness, in our tests we measured 884 nits of peak brightness. The display has a slight blue tint which lends a cooler colour tone to all the elements. It would also have been great if the display supported a faster 90Hz refresh rate.

PERFORMANCE

The Infinix Note 12 Turbo has the newer Helio G96 chipset over the G88 on Note 11 and it largely brings in performance improvements. When it comes to day to day performance, the Note 12 Turbo can run most apps with ease. However, much of the performance chops are brought down by badly optimised and bloatware-filled

just a moment to unlock. The phone also has stereo speakers which are only decent for watching videos.

CAMERAS

The phone features a main 50MP camera alongside a 2MP depth sensor and an AI lens. In daylight, the main camera is capable of producing eye-pleasing and detailed pictures. There is a 50MP mode which lets you capture a high-resolution picture. The portrait mode lends an artificial bokeh to the background which looks equally good as the natural depth of field effect. At night, the Note 12 Turbo manages decent pictures and the night mode improves it by bringing in more details and controlling the highlights.

Price
₹14,999

software in XOS 10.6 which is based on Android 12.

When it comes to synthetic benchmarks, the Note 12 Turbo scored better on AnTuTu than the Redmi Note 11S which also has the same Helio G96 chipset, but the Micromax In Note 2 with Helio G96 got a marginally better score. However, the Redmi Note 11S performed much better in Geekbench single-core and multi-core tests. The Note 12 Turbo aced the PCMark workload test. In the CPU Throttling test, the Note 12 Turbo throttled to 75 per cent of its maximum performance.

In GPU tests like 3DMark and GFXBench, the Note 12 Turbo's performance is at par if not better than the Redmi Note 11S. We played games like Call of Duty Mobile and Asphalt 9 on the Note 12 Turbo where Gamebench recorded 58FPS on average at 100 per cent stability in COD and 30FPS in Asphalt 9. COD was running at medium graphics and high frame rate and we didn't notice any stutters or frame drops in our gaming experience.

The power button on the Note 12 Turbo doubles up as a fingerprint reader which is pretty quick and takes

BUILD	68

BATTERY

On casual use, the 5,000mAh battery in the Note 12 Turbo can last you for a full day and then some. The Note 12 Turbo supports 33W fast charging and on average it took 1 hour 58 minutes to fully charge it.

VERDICT

The Infinix Note 12 Turbo is a good phone, however, given its asking price of ₹14,999, there are certain issues that bring down the experience. For starters, we would have loved to see a higher refresh rate display. Then, there's a case of the XOS which comes pre-loaded with a lot of bloatware. Otherwise, the performance of the Note 12 Turbo is great, however it doesn't do anything extraordinary to give competition a run for their money.

—Siddharth Chauhan

SPECIFICATIONS

WEIGHT: 185g | Display dimensions: 6.7-inches | DISPLAY RESOLUTION: 2400x1080 | OPERATING SYSTEM: XOS 10.6 based on Android 12 | CPU: MediaTek Helio G96 | RAM: 8GB LPDDR4X | STORAGE: 128GB UFS 2.2, Expandable upto 512GB via MicroSD | BATTERY: 5000mAh | CHARGING: 33W wired fast charging | CAMERA: 50MP + 2MP _ QVGA AI lens (Rear), 16MP (Front)
