Pokémon Violet and Scarlet

Nintendo reveal launch dates for the next Pokémon RPG, Violet and Scarlet, as 18 November. <https://digit.in/jun22-96>

Vivo X80

Reliable performer with a couple of chinks in its armour

The phones in Vivo's X series have customarily had alluring camera capabilities and good performance with a competitive price tag. The Vivo X80 made its debut in India at a competitive price of ₹54,999. Not only does it pack an array of camera and videography features, but it also houses a flagship SoC, 80W fast charging, and more. Let's see how it fares in our review.

BUILD AND DESIGN

The Vivo X80 has a curved front and back glass panel with an aluminium frame. It exudes a premium air and feels fantastic in hand. The rear panel resists fingerprints and smudges. The phone weighs 206 g and has a thickness of 8.3 mm, so it feels sleek when using it without a protective case. The phone houses the power button and volume controls on the right, dual stereo speakers on the top and bottom, and a USB C port and the SIM tray at the bottom. Vivo has also provided an IP53 dust and water resistance rating.

DISPLAY

The Vivo X80 features a large 6.78-inch AMOLED display with Full HD+ resolution and 120 Hz fast refresh rate support. The Full HD+ resolution at this price point may be underwhelming at this price point since some competitors such as the Realme GT 2 Pro comes with a QHD+ resolution. That aside, the display is gorgeous with crisp visuals and vibrant colours. The display is great to watch content on since it comes with HDR support and loud, crisp-sounding stereo speakers. The display is also Widevine L1 certified.

The phone comes with a rated peak brightness of 1500 nits. In our testing, we found the peak brightness to be 644 nits without Adaptive Brightness

enabled. We turned it on and this number shot up to 902 nits.

CAMERAS

The Vivo-Zeiss partnership has been immensely successful for the company's X lineup of smartphones and the Vivo X80 is not an exception to this rule. The phone features a 50 MP Sony IMX866 primary lens. You get a 12 MP telephoto shooter with 2x optical zoom and a 12 MP ultra-wide shooter. In daylight, the phone shoots crisp and detailed HDR images with good dynamic range. There's plenty of detail in the shadows and highlights and the phone does a good job of not overexposing or underexposing any area too much. The colours are unrealistic but they do pop and stand out. However, if you are looking for more natural-looking colours, the Zeiss mode will allow for just that. Portrait images taken via the primary sensor are pretty good, with a good amount of detail and sharpness. The edge detection is also pretty decent, however, edges can appear slightly distorted at times. The ultrawide lens shoots fantastic images with good colour.

PERFORMANCE

The Vivo X80 is powered by the MediaTek Dimensity 9000 SoC. This

is paired with up to 12 GB RAM and up to 256 GB storage. In synthetic benchmarks, the phone performs exceedingly well. It compares to the performance of flagships such as the iPhone 13, Vivo X80 Pro and the Samsung Galaxy S22+. However, what concerns us is the SoC's throttling under sustained loads. We ran the CPU Throttling test and saw that the phone throttled to 62 per cent of its max performance in around 15 minutes, which is pretty high.

In real life though, the phone performs admirably in almost any situation you throw at it in the real world, be it social media, web browsing, video streaming, photo editing, or gaming.

BATTERY LIFE

The Vivo X80 packs a 4,500 mAh battery with support for 80 W FlashCharge. The phone lasted 16 hours in our video loop test. The phone provides enough juice in one charge to get most users through a day's usage with ease. When it comes to charging though,

do note that the phone doesn't come with PD charging support, so if you use a third-party fast charger, the phone will only charge at 10 W.

VERDICT

The Vivo X80 exudes panache and is one of the best-looking phones in its price range. Not just that, it is also an extremely reliable performer, offers good battery life with speedy 80 W fast charging, and snaps great pictures. It is a well-rounded package that would serve most users well.

—Dhriti Datta

SPECIFICATIONS

WEIGHT: 206g | THINNESS: 8.3mm | PROCESSOR: MediaTek Dimensity 9000 | RAM: 8GB/12GB | ROM: 128GB/256GB | BATTERY: 4500mAh | FAST CHARGING: 80W FlashCharge | OS: Funtouch OS 12 (Based on Android 12.0) | DISPLAY: 6.78-inch AMOLED, 2400x1080 resolution, 120Hz refresh rate | CAMERAS (REAR): 50MP + 12MP + 12MP | CAMERA (FRONT): 32MP
