

Fighting Fake Profiles

A social media network is a vast network. It connects us with different people and at the same time it becomes necessary to be safe in this online world. In this article we will discuss some concerns regarding social media platforms, the rising fake accounts and how to detect those.

In this modern tech savvy world, connecting with people has never been easier. With one click we can connect with anyone, even if it means connecting with someone who is sitting all the way across the globe. All this was possible with the advancement of social media platforms. It is a big step forward from the primitive methods of communication and in a way social media platforms are regarded as a space where one can present themselves and at the same time connect with like minded people.

Anyone with their hands on a basic smartphone can create a profile and be on most of these social media platforms. The question to consider now

is, how reliable are these platforms? With everyone using them, doesn't it become very easy for fraudulent people to easily woo someone and get what they want?

Creating a fake profile is as simple as creating an authentic one. One does not know who is operating from behind the screen using the identity of someone else. And with all the information being available on the platforms about someone, it is served to the fake profile user on a platter, making their work much simpler and giving them access to maliciously attack

on someone else's privacy. As social media sites have enormous personal data, this gives access to potential fake profilers or scamsters to misuse one's information, resulting in breach of privacy. So as an individual, safety becomes the prime concern when using social media.

Earlier, people didn't pay much heed towards this. Things started to come into the spotlight when the users of the leading social media platform Meta, then Facebook, reported a breach of privacy from Facebook's side as it violated user's privacy. This incident brought about a major concern about using and trusting social media platforms. Similar concerns were raised by the users of WhatsApp,
