

# COMPUTEX 2022

A compilation of all the announcements of note during COMPUTEX 2022

## AMD Ryzen 7000 – Finally here

The AMD Ryzen 7000 announcement was arguably one of the most hyped and anticipated ones of COMPUTEX 2022. During AMD's presentation, everyone watched on and eagerly awaited with bated breath for them to announce this line of CPUs. When it did finally happen, there were some surprises.

Zen 4 based AMD CPUs built on TSM's new 5 nm node have a 15 per cent boost in single-threaded performance over its predecessor, the 5000 series. During AMD's demon-

stration of the CPU handling AAA gameplay, the clock speed remained at 5.5 GHz. This processor also had a Blender workload thrown at it, in

which it outperformed Intel's Core i9 12900K by a 30 per cent margin.

To add to this was the new I/O die that the Ryzen 7000 series will sport. This 6 nm die, with its AMD RDNA 2-based graphics engine, will offer support DDR5 memory and PCIe 5.0 SSD support. The new 7000 series CPUs will be fitting into the AMD Socket AM5 platform, which also got its share of announcements at the event. Brands flocked in to capitalise on the hype surrounding the 7000 series making a series of announcements in every respect.

### Corsair Voyager – Setting sail for the laptop world!

Corsair's Voyager laptop broke the surface during COMPUTEX 2022. Decked out with AMD Ryzen 7 and Ryzen 9 CPUs, 16 or 32 GB RAM options, and a 16-inch 240 Hz, 1440p display, it is targeted towards the gamer and streamer market segment. Integrated into the laptop's body is an Elgato-powered streaming command centre to make it a rounded streaming package.

### MSI QD-LED Monitor – Alienware competitor

MSI going head-to-head with Alienware, launched their QD LED monitor, the MEG 34C QD-OLED, and it looks impressive on the spec sheets. It comes close to the Alienware offering with a 21:9 aspect ratio along with 99.3% DCI-P3, 97.8% Adobe RGB, and 139.1% sRGB coverage. It also boasts a 0.1 ms response time, a refresh rate of 175 Hz, and support for MSI "smart features" such as Sound Tune, Optix Scope, and Smart Crosshair.

### 500 Hz ASUS Monitor – The speed demon

Putting their foot down on the numbers pedal, ASUS and NVIDIA raced past every competing brand at the event, announcing the world's first 500 Hz monitor – the ROG Swift. This 24.1-inch beast, with a 1920x1080 resolution, brought in another innovation in the form of an e-TN panel. The new panel is supposed to decrease the response times by 60 per cent compared to a standard TN panel.
