

A heart that swells with pride, pumps in thrill,
goes through a roller coaster of emotions every day
and makes one feel alive. So, when the all-new Pulsar 250
was in the conceptual stage, the designers started with
its heart, the engine.

Pulsar 250's engine offers power on demand,
taking the quintessential 'Pulsar rush'
to the next level. And just like the heart
that stores a quarter litre of blood,
the engine is a quarter litre beast.
So, if someone is looking for a ride that
will tug the strings of their heart, behold.
For they are looking at their match!

WHEN THE HEART IS IN THE RIGHT PLACE

With a wider torque band that offers
85% of peak power, one will never run out
of juice! Its liquid-cooled motor can
produce 27PS of power at 8500rpm and 23.5 Nm
of peak torque at 6500rpm. Allowing the rider to experience
the true meaning of the phrase – when the heart is in the right place.

DOES IT HAVE YOUR HEART?

It sure does! Because the all-new Pulsar 250 defies the rule that not every new iteration has to fit the rule
of 'faster the machine, more tempting the choice'. Unlike others, the biggest, boldest and fastest Pulsar
till date comes with a heart that offers an unparalleled and thrilling riding experience. Something that every
Pulsarmaniac seeks!
