Canada bans Huawei 5G tech

In a move that has caught the eye of the entire tech industry, the Canadian government is all set to ban Huawei from installing their 5G network equipment in the country. Not only Huawei but another Chinese corporation, ZTE, which is partially state-owned, will also be hit by the ban hammer. <https://dgit.in/huawei5gban>

WHAT'S NEW

Adios iPod!

Apple announced the formal discontinuation of the fabled music device – the iPod – on May 10. Headlining the article with the phrase, “The music lives on,” the company included a picture gallery showcasing all the iterations of the music device in press releases. Internet communities too got into the nostalgia trip. Forums and discussion pages all over were flooded with stories relating to the beloved device. However, the diminishing sales number and the loss in the relevance of the product warranted this move. The company’s senior vice president of Worldwide Marketing said, “Music has always been part of our core at Apple, and bringing it to hundreds of millions of users in the way iPod did impacted more than just the music industry — it

also redefined how music is discovered, listened to, and shared”. For those who want to get their hands on the iPod as a device that they would like to use regularly or as a souvenir, Apple will sell

their remaining stocks. The latest iteration of the iPod touch is listed on Apple’s online store and will remain there until the stocks last. It comes equipped with a 4-inch Multi-Touch IPS display, an 8 MP camera, the Apple A10 Fusion Chip running iOS 14, and come with the iconic Apple EarPods in the box. <https://dgit.in/farewellipod>

Small Android phones. Want one?

Eric Migicovsky is the man behind the raging trend on the internet – bringing back small Android phones, or “iPhone Mini-sized Android phones”. Eric has built a webpage listing all his arguments in favour of a small yet powerful Android phone, stating that this might be the last chance for many to urge the companies to make

a small and powerful Android phone. This comes on the back of Apple bringing back the iconic iPhone 5S-inspired form factor to its new Mini

phones. Eric wrote on the website, “It’s increasingly clear that a small premium phone is not on any OEM roadmap. So I’ve decided to take matters into my own hands. My goal here is to rally other fans of small phones together and put pressure on Google/Samsung/anyone to consider making a small phone.”

Deep faking into bank accounts

As if the existing threats to our hard-earned money and assets weren’t enough, a report published by Sensity has brought to light that the liveness tests used by banking identification software can be fooled with deep fakes. <https://dgit.in/deepfakekyc>

Glass-free 3D displays

Acer introduced their latest line of glasses-free stereoscopic 3D displays, developed by the company’s Spatial Labs division. This display might soon make it into the market, as it had been teased last year in Acer’s Concept 7D laptops. <https://dgit.in/glass-free3ddisplay>
