

DOES THIS SECTION EVEN NEED AN INTRODUCTION? FROM COMPUTERS TO MOBILES, AND HEADPHONES TO GPUs, IT'S ALL HERE...

THIS MONTH IN TECH: We pit smartphone cameras under ₹50k and ₹30k price bracket. In devworx, you can learn how to build a real-time chat app, and much more.

Samsung Wallet is back!

First, it was Samsung Wallet. Then it was renamed Samsung Pay. But since time is a flat circle, Samsung is resurrecting the Wallet app — essentially, combining many existing Samsung services into a single app. This time, it includes cryptocurrency too! <https://dgit.in/SamsungWallet>

WHAT'S NEW

Microsoft Defender now on Windows, macOS, iOS, and Android

Microsoft is releasing a new cybersecurity app called Defender, for Windows, macOS, iOS, and Android.

While Microsoft has used the Defender nickname for its antivirus protection for ages, this new cross-platform software is designed to be a simplified platform that will be available for Microsoft 365 Personal and Family subscribers, with features varying depending on the platform.

There will be no antivirus protection on iOS or iPadOS. The app instead will provide web phishing protection alongside a dashboard

that includes security alerts for other devices.

Defender for Android will include antivirus protection and

the ability to scan for malicious apps. The app will also monitor links to protect against web phishing. On Windows, Defender will function more like a dashboard, than as a replacement for the built-in Windows Security app.

Big tech agree to new EU rules against disinformation

Some of the world's largest online platforms, including Facebook-owned Meta, Microsoft, Google, Twitter, Twitch, and TikTok, have signed up to a new EU rulebook aimed at combating online disinformation. The code contains 44 specific "commitments" for businesses addressing a wide range of potential disinformation harms.

Many US tech companies, including Facebook and Twitter, have already implemented similar initiatives in response to political and

regulatory pressure. However, the EU claims its new code of conduct will allow for greater oversight and enforcement of these operations.

The signatories will be required to make added efforts to ensure that disinformation is limited, if not eliminated on their platforms. The signing took place on June 16, 2022.

YouTube to allow video "corrections"

YouTube is introducing a new "corrections" feature that will allow creators to easily add more obvious corrections. After uploading a video, creators can make changes that will appear as infocards in the top right-hand-side corner of the video.

Use Voicemod AI and sound like Morgan Freeman

Voicemod has added new voice effects that incorporate AI. The "Morgan" voice is particularly great, enabling you to impersonate the iconic film star or merely a talented voice actor. The new pilot voice is also a lot of fun.
