Apple iPad Air (2022)

Utilitarian Maximus

The Apple iPad Air fills the sweet spot between the regular iPad (9th gen) and the top-of-the-line iPad Pro. It brings with it the power of the new M1 chip along with an upgraded front camera with Center Stage while maintaining the sleek and lightweight profile that iPads have always been known for. Here's how the device fares.

BUILD AND DESIGN

The iPad Air 2022 has the same build and design as the 2020 model. It's a familiar design with flat edges, rounded corners and slim bezels, all packed in a neat and minimal aluminium build. The top button doubles up as a Touch ID sensor. On the right side, there are volume buttons, a magnetic connector to attach the Apple Pencil and a nano-SIM tray on cellular models. There are two speakers up top along with a microphone and two at the bottom along with a Type-C port. The buttons feel solid and are tactile, going with the whole premium build.

DISPLAY

The display is the centrepiece of any tablet experience and with the iPad Air, we get a great and immersive display. It's the same display as the previous-generation iPad which means you get crisp and vibrant imagery. The screen also supports Dolby Vision. Though it misses out on HDR and high refresh rate support, you are still getting a great viewing experience.

In our tests, the peak luminance of the iPad Air 2022 display stood at 520 nits without True Tone and 470 nits with True Tone enabled. These are pretty good numbers and tell us that the display can get really bright, even under harsh sunlight.

PERFORMANCE

The new iPad Air gets the same performance chops as the Pro models which

CAMERAS

The main camera is the same as the last generation and for all intents and purposes is pretty great. The pictures from the rear camera are decent with a good amount of details and close to natural colours. This camera can also record in 4K UHD at up to 60FPS and supports electronic image stabilisation.

Apple has upgraded the front camera which is now a 12MP ultra-wide angle sensor with a 122-degree FOV, wide enough to capture a roomful of people.

With it, we also get video calling features like Centre Stage which automatically changes the frame to keep you in the middle of the frame.

Price
₹54,900

means that it is super smooth in daily use and won't let you down when you need that power efficiency. This is the same M1 chip that you will find in the MacBook Air which has been designed in-house and is a solid step-up over the A14 Bionic.

With the M1 chip inside, the iPad Air 2022 is running at warp speed and it feels really powerful at handling tasks like multi-tasking, sketching, editing 4K videos, retouching photos, music production and more. The iPad Air 2022 stood tall in our testing process raking great scores in synthetic benchmarks like AnTuTu where it crossed the 1 million mark which brings it very close in performance to the iPad Pros. We ran games like COD Mobile, and BGMI where the iPad didn't show any signs of frame drops or janks.

The Apple Pencil is a great tool for using the iPad Air and makes it really easy to jot down notes, scribble and create professional-grade artworks. If you're a creative person who's looking to buy the iPad Air mainly for sketching and drawing, you cannot go wrong with the Pencil as it offers an unmatched experience with a host of supported apps like Notability, Sketchbook, Procreate or Affinity Photo.

BATTERY LIFE

The new iPad Air has the same 28.6 Wh battery as the previous generation. Apple promises to offer up to 10 hours of watching videos. In our tests, we found that the device does live up to that claim. In daily use, you can expect around 6-7 hours of screen time.

VERDICT

If you happen to be someone who's looking for a great tablet experience the iPad Air 2022 is a great option for a wholesome experience. As for whether it's a laptop replacement, we'd say it has the capability to replace a whole lot of laptops, especially now with the M1 chip but it's still not there.

—Siddharth Chauhan

SPECIFICATIONS

DISPLAY: 10.9-inch LED, 2360x1640 pixels, Oleophobic coating, 500 nits (typical) | THICKNESS: 6.1mm | WEIGHT: 462g | STYLUS: Apple Pencil (2nd generation) | PLATFORM: Apple M1 octa-core | RAM: 8GB | BUILT-IN STORAGE: 64GB/256GB | 5G SUPPORT: Yes | USB-C: Yes | 3.5MM JACK: No | OS: iPadOS 15 | REAR CAMERA: 12MP (f/1.8) | REAR CAMERA VIDEO: 4K (30/60FPS), 1080p (30/60FPS) | FRONT CAMERA: 12MP (f/2.4) | SPEAKERS: Stereo speakers | BATTERY AND CHARGING: 28.6-watt-hour, 20W charging adapter | COLOURS: Space Grey, Starlight, Pink, Purple, Blue
