Google News has redesigned its front page to give a more personal touch, making topics easier to access. <https://digit.in/jul22-43>

Notes feature for Twitter

Twitter launching a long-form notes feature, calling it Twitter Notes in the coming weeks. <https://digit.in/jul22-44>

Moto G82

Riding high on features and stock Android

The Moto G82 is the latest mid-range phone from Motorola and builds upon the Moto G71 from earlier this year. Is the Moto G82 just another mid-range outing for Motorola or does it pack enough firepower to have an upper hand against incumbents like the Redmi Note 11 Pro+ and OnePlus Nord CE 2 Lite? Here's what we found out.

BUILD AND DESIGN

The Moto G82 is pretty thin and lightweight but also very comfortable to hold in the hand with a slightly curved back panel. Even though the frame is plastic, it doesn't feel flimsy. There's a nice pattern on the back which is also home to a lot of finger-prints and smudges. The volume buttons are positioned slightly higher than normal which could be an issue for those with small hands.

DISPLAY

In our use, the display of the Moto G82 was one of its best highlights as the screen got bright enough at even 70-80 per cent brightness and produced a wide range of colours making it great for watching videos and movies. But just like the Redmi Note 11 Pro+, the display doesn't support HDR playback on YouTube, Netflix and other apps.

PERFORMANCE

Most phones with Snapdragon 695 under the hood offer a balanced performance. While Snapdragon 778G offers better performance chops, more brands have accepted the 695 for their mid-range offerings. The Moto G82 performed as expected in our synthetic benchmarks getting scores that are at par with other Snapdragon 695 phones.

The G82 ran COD Mobile at 60FPS at 100 per cent stability, BGMI at 30FPS and 100 per cent stability and

Asphalt 9 at 30FPS at 97 per cent stability. This goes on to prove that the G82 is great for playing games.

CAMERA

The Moto G82 has the same cameras as the Moto G71 except that you get OIS (optical image stabilisation) on the main camera in this one. The main camera of the G82 takes good and sharp pictures in daylight. In low light, the Moto G82 takes decent pictures but the loss in details is clearly visible when pixel-peeping.

Switching to night mode improves the contrast, and shadows and eliminates most noise from the picture but at the cost of the brightness. Here, the Redmi Note 11 Pro+ performs much better as it can control highlights and shadows in a much more efficient way giving you a good nighttime picture. Coming to the ultra-wide camera, it takes decent wide-angle pictures but as you move away from the centre, the details start getting hazy.

There is a 2MP macro camera that's good for extreme close-up shots but keep in mind that because it's a low-resolution sensor, you will need enough light on the subject for a decent picture. As for the selfie camera, works great and takes close to natural-looking pictures with a good amount of brightness and details.

BATTERY

You're looking at a full day's worth of battery life if you're a heavy user who's on their phones for most of the time watching videos on YouTube or social media, playing games, calling, messaging, using cameras and more. But casual users and those with little to no multimedia consumption can get over two days of battery life from the G82 which is much better than what most phones offer at this price.

In our video loop test, the G82 lasted for over 16.5 hours which is a great score and reminds us of the battery performance of the Redmi Note 10 Pro Max. The phone supports 30W fast charging but Motorola is providing a 33W charging adapter in the box. It took around 1 hour and 46 minutes to fully charge the G82 from 0-100 per cent. Of course, you will find faster charging standard on the Redmi Note 11 Pro+ which supports 67W fast charging.

VERDICT

There are many reasons to buy the Moto G82 phone but none greater than the fact that it runs stock Android 12. It lets you customise the little things like fonts, colours, icons, themes and more as a part of the MyUX personalisation features. The user interface is clean, slick and a breeze to use.
