

The sharing menu in Gyazo

tual communications in an organisational structure.

Pro sharing features also include unlimited creation and sharing of screenshots, which otherwise in the free versions is limited to 4 collections. Google Workspace integration is also available, which makes working with a team much easier. The images uploaded by a team can also be identified using customised subdomains.

ORGANISATION

In Gyazo, several organisation options are available for you to use. There's the collections feature, which lets you organise your screengrabs into individually labelled albums, of sorts. Then, there is also the hashtags feature that lets you add hashtags of your choice to each individual capture.

To create a collection of screen-grabs, go to the homepage, and in the menu on the left side, locate the 'Create New Collection' option. Click on it, add a name and you are set. Now, if you want to add an image or other screengrab to this collection, hover the mouse over the image, and check the circular box that appears over it. A side menu will open, which will have a number of options including 'Add to Collection'. Click on that button, choose the collection you want to add the image to, and it will be done. At this stage, alternatively, you can also create a new collection, starting with this image. What you have to do is, instead of clicking on add to collection, you will

previously explained process, you will be asked whether to add the file to an existing collection or create a new one using this file. Chose the option that you want to and you will be set.

CAPTURE WHAT YOU LIKE

Not only can Gyazo be used to take screenshots, but also to create GIFs and short video highlights that are instantly sharable. All the content you capture using Gyazo gets stored in an organised space online, saving space on your computer, and letting you see all the content in a centralised space.

If you have shared an image collection or a single media file using Gyazo, the images that the recipient get added to their browsing history section. The same happens when you browse someone else's collection too. All the captures are saved on every user's homepage and sorted according to the date taken, by default.

As we have mentioned before, Gyazo's free app has the ability to capture GIFs and videos. However, the capability to record unlimited HD replay videos is limited to Windows only. The duration of these replay captures is limited to 7 seconds and gets bumped up to 30 seconds in the Pro version. You can also edit

have to click on the 'Create new collection' button. It will ask you for a collection name; after entering which, your collection will be ready to go.

You can also add a screengrab to a collection after you open the file. Just go to the top-right menu bar and click on the button.

Just like in the

and make changes to the captured media in the application itself. To do that, you will have to open the file, navigate to the top-right menu bar, and find the edit button, labelled with a pencil symbol. Click on it, and you will be taken to the edit window, where you will find all the required edit tools laid out for you to use.

GET IMAGE SUGGESTIONS

If you are a user of Gyazo and have a Pro subscription, you are eligible to get features like auto-tagging of images and OCR. They would help you organise your capture of the screenshots and short clip recordings in a better way. Using this feature is not convoluted. If you have an active Gyazo Pro subscription on your account, the same webpage that displays it will have all the OCR and related information that you may need after you take a screenshot.
