

Urbanista Los Angeles Headphones

The Urbanista Los Angeles Headphones are here and are on the way to being a complete gamechanger. The headphones have a sleek and stylish design, but that's not what makes them special. What does make them stand out is that the headphones come equipped with a Powerfoyle-patented solar material on the top band. This makes the headphones capable of converting any form of light into energy. Yes, a self-charging headphone!

The solar panel does not feel bulky and has been embedded into the design of the headphone pretty seamlessly. This means whenever you pick up the headphones

to listen to audio, more often than not, you will find them fully charged. Urbanista promises powerful ambient noise suppression with the revamped ear cups. If that is not enough, there's a button to choose the noise cancellation mode and voice assistant. The dedicated mobile app for the Urbanista Los Angeles will also help you customise your headset. The power button and volume rockers are located under the right ear cup. The headphones are priced pretty exorbitantly at ₹24,999.

Pro-Ject E1 Turntable

This easy-to-use turntable from Pro-Ject Audio System is designed for beginners or experienced vinyl users alike. The E1 is from the first series of Pro-Ject and it claims to deliver great sound on a budget. The E1 comes with anti-skating and a pre-adjusted tracking system which helps provide a good experience when you're using the turntable. The turntable comes with a 33/45 RPM electronic speed switch. The device is available in gloss black, gloss white and walnut colourways; all equally appealing. The platter is designed in a manner that it creates an ideal and anti-resonant environment when you're playing your vinyl records. The company claims that their extensive development process ensures that the sound quality is not compromised. The company has used premium materials and designed the device aesthetically to have it look great in your household. 'The lightweight and low friction 8,6" aluminium tonearm is optimized for the high-quality Ortofon OM5e cartridge and will bring out its maximum potential,' claims Pro-Ject. The price range is a little above ₹50,000.

Dygma Defy

Defy is Dygma's new ergonomic keyboard. This keyboard promises to be one of the most ergonomic ones out there due to its unique design. Defy comes in a split design that allegedly ensures that you ulnar nerve isn't harmed due to ulnar deviation. Something that is reportedly common on keyboards with a normal form factor. The keyboard also comes with tenting that prevents hand pronation. The keyboard can be moved up in degrees ranging from 7 to 60 with many pitstops in between, which means you do not have to prone your palms when typing. Scientists have stated that proning of our hands (the position of our hands during typing) reduces blood flow to our palms. Defy's ergonomics allegedly take care of this. It will also come with palm pads for added support. The device is also a fully programmable keyboard. You can create up to 10 custom setups for your different combos. It has RGB support and Dygma has

also developed an RGB underglow for some extra bucks. The body is anodised aluminium and you can also swap your keys whenever you feel like it. Dygma Defy arrives at \$299 without addons such as RGB underglow.
