

## Amazfit GTS 2

**A**mazfit GTS 2 has finally launched in India. The lightweight smartwatch, which weighs only 24.7 grams, packs a punch with the features it offers. The advertised battery life promises 7 days of runtime. The smartwatch comes with an array of top-of-the-line abilities such as a real-time heart rate monitor, blood oxygen level measurement, stress monitor, 5ATM water resistance, sleep tracking, sports tracking, step counter, call and app notification alerts, standing reminders, phone finder, weather forecast, music control, offline voice

control, and calling. Phew! That was a mouthful! The GTS 2 also comes with a 1.65-inch 348x442 pixel AMOLED colour screen.

The speaker is on the left side while the physical button is on the right. The physical button offers feedback options such as unlocking the smartwatch, waking the screen or returning to a previous menu. The GTS 2 comes with more than 90 sports modes and supports over 60 watch faces. Most of the watch faces are customisable and come with a matching Always on Display (AOD). The device is compatible with both Android and iOS devices.

It is priced at ₹12,999 and comes in three colour variants – Black, Gold and Grey.

## Multak EDC Tool Pen

**T**he Multak EDC Pen tool is reportedly the world's first 10-in-1 multi-functional pen tool. With Multak EDC, you have yourself not just a writing pen but also a graver knife, flashlight and more. All of this comes with a solid grip that lets you use all the inbuilt tools with ease; be it home or outdoors! The Multak EDC has multiple utilities, some of which we've mentioned above. In total, there are 10 uses including a writing pen, graver knife, whistle, survival breaker, screwdriver, flashlight, super compact glass breaker, compass, and bottle opener. The pen is made to last too, packaged in an aluminium alloy body with slip resistance. All of this in a modern design which is also lightweight – merely 42g. The multipurpose pen is priced at \$35.

## STEP FPGA

**T**he Field Programmable Gateway Array (FPGA) board by STEP is one that will be loved by all electronics enthusiasts. The STEPFGPA MX02Core board can be enjoyed by both mediocre enthusiasts and hardcore hardware players. You can add multiple extension modules for advanced use cases such as industrial controls, communications, signal processing, and synthesis with the 36 GPIO pins and a maximum of 400 MHz clock frequency (boosted by the internal PLL). The board also comes with a UART TX/RX module. This means that you can debug on your computer with a Serial COM port.

The STEPFGPA board does not require driver installation and is supported on Windows, Mac and Linux operating systems. You will get support development

based on web-based IDE platform and on board peripherals – switches, pushbuttons, LEDs and segments. The integrated Flash memory allows for quick hardware configuration (less than 10 minutes) while still integrating 4000+ LUTs for mild and even commercial-level digital design process.

The board is made of PCB in four layers that comes with immersion gold technology and the components are lead free.
