

INFURIATINGLY GOOD

By Manish "Trigger-Happy" Rajesh | feedback@skoar.in

The April Fool's joke is now a reality. Diablo Immortal released a few weeks ago for both mobile and PC, and we've been playing it non-stop since. We also hate ourselves for it. *Sigh* Read on to find out why.

Don't you guys have phones?

This is a mobile game through and through. Yes, we literally just mentioned that the game was released on both PC and mobile, but don't let that fool you. The PC version was basically a last ditch effort to appease long time Diablo fans, but what you're getting is just Diablo Immortal for mobile, emulated on a PC. One look at the UI and the controls should be all you need to figure that out. For instance, the mouse scroll wheel doesn't work, you need to click and drag the UI in order to scroll up or down. Plus the game was designed with touch controls in

mind, so playing with a mouse pointer just feels wonky and kind of ruins the experience. Although, this could be subjective. With that out of the way, let's move on.

The Lord of Terror will return

Yes, there's a story. Those of you who have played mobile MMOs in the past know that nobody gives a baboon's backside about the story, but it's there. It's alright. Nothing to write home about. You have no clue as to why the characters are doing what they're doing or why they're as invested as they are. However, the end of the story, the point at which you're approaching the level cap, i.e., level 60, it gets a bit interesting. For most of the main storyline you're trying to stop Skarn, the Lord of Damnation. A few of us have played Diablo 3, and Immortal apparently continues where that left off. Diablo isn't around

anymore, so we guess Skarn wants to take over Hell. We want to stop him, obviously. He plans to use the power of the worldstone shards to do it, but we're yonking and destroying them before he can get his hands on them. Which ultimately leads to the final showdown between you and him. That's about all there is to the story. The main campaign also serves as a tutorial of sorts to the game. The game (and the grind) truly begins when you reach level 60 and hit the Paragon levels.

This is Diablo on mobile

And that's a good thing. Having played quite a few mobile MMOs in the past, we can say with certainty that Diablo Immortal is a great game, but only in terms of gameplay. It's fun, intuitive, action-packed, satisfying, all those good things. The UI is akin to other mobile MMOs and even MOBAs, with the movement
