

SuperchARging India's Teachers

How Kerala edtech startup TutAR is empowering schools and teachers to make teaching relevant and fun again in classrooms

Anup Semwal | feedback@digit.in

Last month, Suvith S was flitting around Chennai promoting TutAR Next Reality Classroom, an app powered by augmented reality. It is developed by Thrissur-based startup Infusory, in which designers have covered wide-ranging subjects through eye-popping 3-D models – boars, zebras and hippopotamus for kindergarten kids; anatomy of teeth, skull and muscles for middle schoolers; and wheatstone bridges, potentiometers, and carnot engines for high school nerds. These 3-D models pop up beside teachers on interactive panels – or on Zoom if someone is still taking classes online – and can be rotated and flipped, upside-down, left to right, and front to rear.
